ANNOUNCEMENT.

The publishers of this book have endeavored to make as complete Six per Cent. Interest Tables as its size would permit, and have, therefore, with the exception of a Time Table on page 5, inserted no other tables.

The calculations are made on single dollars from one to one thousand, and on hundreds from one thousand to fifteen thousand dollars.

A method has been used in making the computations which admitted a test that insures their accuracy.

It is believed that the tables will be found absolutely correct, and the most complete and convenient in arrangement heretofore published.

ITHACA, N. Y., 1880.

EXPLANATIONS OF TIME TABLE.

This table is intended to show the month and day on which a promissory note will mature when drawn for a certain number of days.

Example: To find the date on which a note drawn at ninety days from Oct. 16 matures, run across the top of the table until you come to October, down the column to 16 in the first row of figures, opposite which you find 288, to which add 93 (being the time of the note with three days grace), and you have 381; now follow up the figures until you come to 381, which you will find in the lower table opposite January 17, which would be the day the note is due.

In leap year in passing over February a note would fall due one day sooner than is shown by this table; in all other years it will be found correct.

Should you desire to find the number of days from a given date in one month to a given date in any other month, say from the 10th of May to the 16th of October, run down the first May column at the top of the page until you come to 10, opposite which you will find 129, which number put down, then run down the October column until you come to 16, opposite which you will find 288, from which subtract the 129, which leaves 159, the number of days from May 10 to October 16.

In passing over February in leap year add one day.

A note maturing on a legal holiday or on Sunday is due the day before.

TIME TABLE.

EXPLANATIONS OF INTEREST TABLES.

The time will be found in the middle column of each page; over each of the other columns beginning on page 7 and running consecutively through the book will be found the principal or sum on which you may desire to find the interest.

Example: To find the interest on five hundred and ninety-one dollars for one year, three months and thirteen days, turn to page 105, run down the time column, and opposite the thirteen days, in the column under the five hundred and ninety-one dollars, you will find the interest, one dollar and twenty-six cents; follow down to three months, and you find the interest, eight dollars and eighty-seven cents; and opposite twelve months (one year), you find thirty-five dollars and forty-six cents, which gives you the following result:

Interest on $591 for 13 days, - -	$ 1.26
" " " " 3 months, - - -	8.87
" " " " 1 year, - -	35.46
Interest on $591 for 1 year, 3 months, and 13 days,	$45.59

The interest on dollars is shown in dollars and cents, and on cents in cents and one-hundredths of a cent.

Example: To find the interest on eighty-seven cents for one year, turn to the column over which you find eighty-seven dollars, where you find the interest for one year to be $5.22, which, divided by 100, makes five and twenty-two hundredths cents—the fraction being less than one-half, is not counted; therefore the interest is five cents.
